dermatologically
tested**

NEW

1. Compared to all competitors in the Slip junior category. 2. Compared to MoliCare® Slip 6 drops, XS and S.

Continence Management: A real challenge for children and adolescents.

Daytime urinary incontinence is common among children and affects approximately 7–10% of those aged 5–13 years.³ Among children with special needs, the prevalence is even higher, creating an urgent need for reliable, medically appropriate solutions.⁴

Despite these figures, suitable incontinence products for this group remain limited, and it often represents a significant healthcare challenge.

Small size. Reliable protection.

At **HARTMANN**, we support healthcare professionals and caregivers who care for children and adolescents needing comfort, dignity, and reliable protection.

That's why we created **MoliCare® Slip JUNIOR** – the continence management solution with the highest absorbency in its category.¹

Special design for juniors and small-bodied people.

- **Hip circumference:** 50 – 80 cm
- **Size:** XS/S (<40 kg)
- **Highest absorbency** of 1,914ml
- **Smaller leg cut-outs** with reduction of approximately 45% to help prevent side leakage on thinner legs²

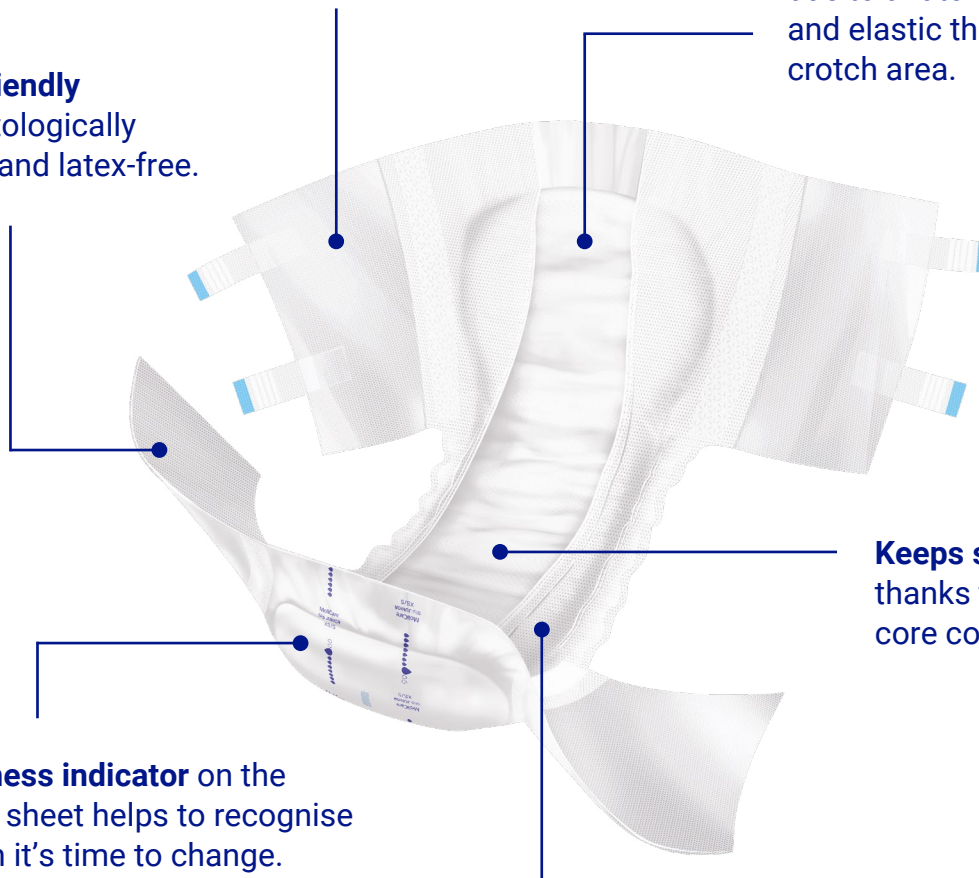

3. Nieuwhof-Leppink, Anka J., et al. "Daytime urinary incontinence in children and adolescents." *The Lancet Child & Adolescent Health* 3.7 (2019): 492-501.
